

**Introducing
ROK-solid security,
made simple.**

**Encrypted access to
high-security sites is simple
with the Cypress ROK
Retrofit OSDP Kit.**

Cypress is known for solving complicated access control problems with simple solutions, saving integrators and their customers time and money.

Cypress Retrofit OSDP Kits let you upgrade to high-security, encrypted OSDP while retaining a Wiegand panel, for the ultimate in security and affordability.

Benefits

- **High security now:** OSDP Secure Channel protects against data skimming, eavesdropping and replay attacks at doors requiring the highest levels of security
- **Affordability and time savings:** Upgrade to high security while retaining the Wiegand panel; in many cases, use existing cable
- **Future value:** With OSDP, you gain top security without being locked into a proprietary system
- **Ease of use:** Factory-configured OSDP encryption for high security right out of the box

Cypress Retrofit OSDP Kits include your choice of Farpointe OSDP Reader and the Cypress OSDP-Wiegand panel Interface. This provides an OSDP connection between the OSDP reader and the existing Wiegand panel.

The entire data connection is securely encrypted, from the reader outside of the door, to the interface at the panel. The interface also supports reader I/O signals from the panel, such as LED and buzzer.

UPGRADE TO HIGH SECURITY
